

A Lighting Guide for Interior Batten Applications

Visit our website www.eterna-lighting.co.uk for technical information and features

LED interior battens are the energy saving alternatives to traditional fluorescent versions

Battens suited for interior use generally do not require a high rating for Ingress Protection (IP), or high rating for Impact Resistance (IK). If the application does require a higher rating for IP or IK then you may need an Exterior or "Weatherproof" batten instead.

It is important to consider visual comfort through light distribution and CCT, and enhanced energy savings via controls, to ensure the right light is available where it is needed, and when it is needed.

Interior LED battens are suitable for a mounting height between 2.5m and 5m
