6

LED Emergency Carina
Ceiling/Wall Light

7

LED Aluminium
Emergency Wall Light

8

LED Emergency Square
Prismatic Utility Light

Emergency Exit Signs - Identify Escape Routes

Emergency Lighting - Illumination if the Mains Power Fails

Viewing Distance

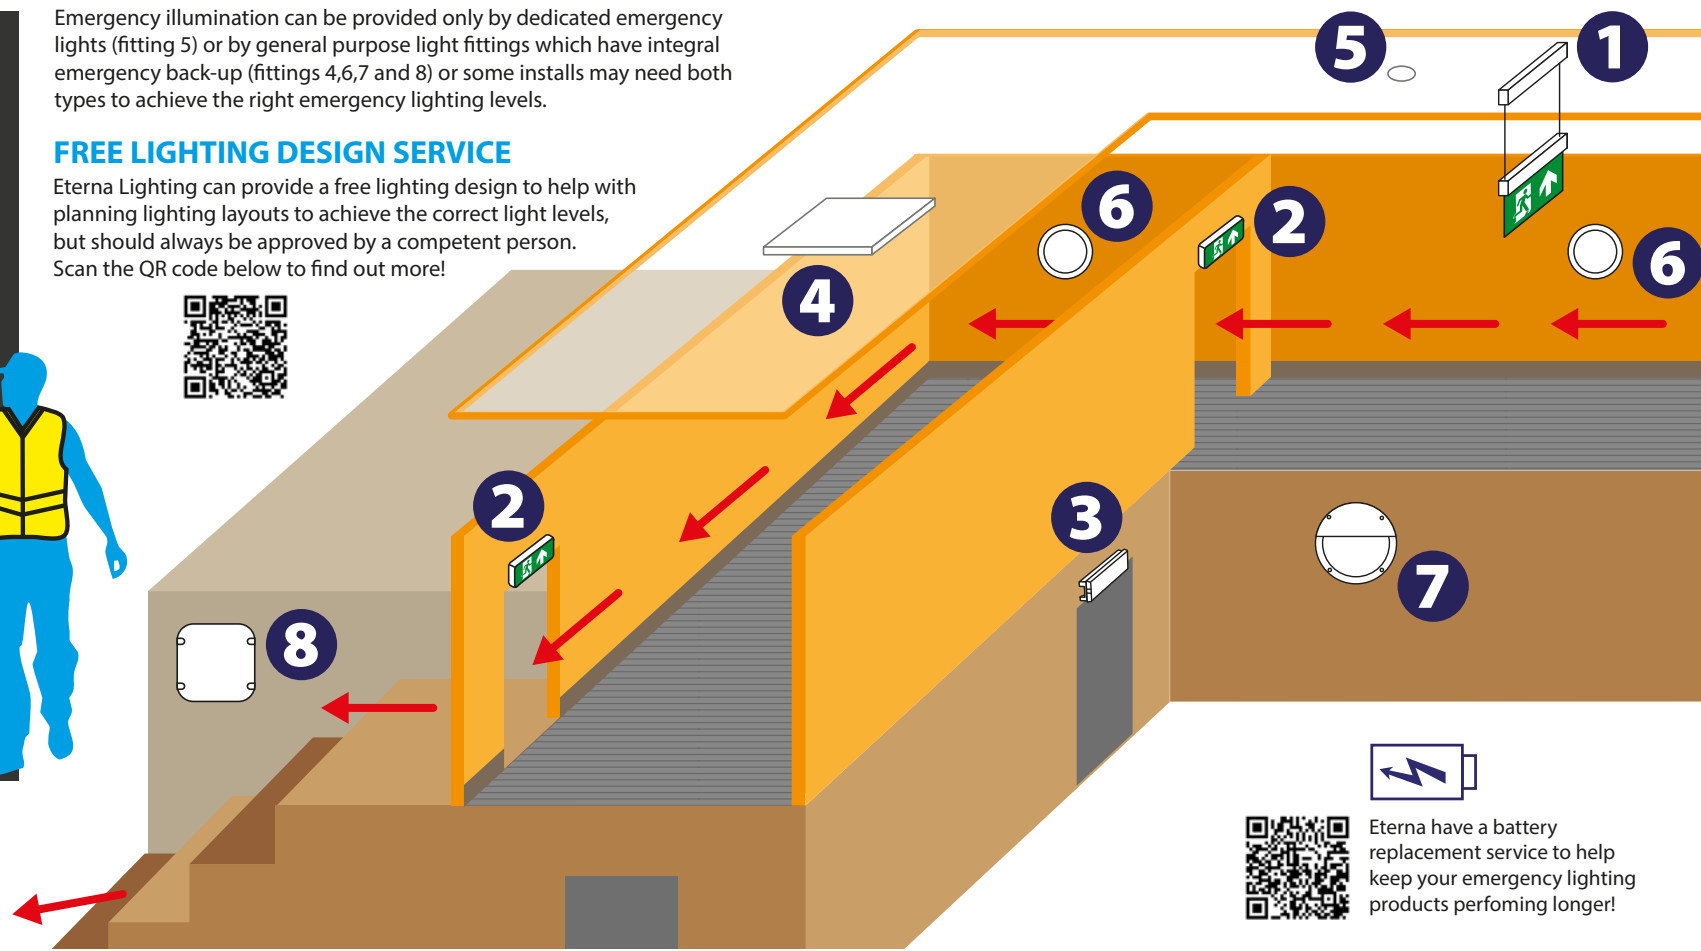

Viewing distance is measured from where the fitting is installed to where it can be seen at a maximum distance in a dark environment.

Emergency exit signs should be fitted at a minimum height of 1.8m to ensure they are visible above the heads of people.

Emergency illumination can be provided only by dedicated emergency lights (fitting 5) or by general purpose light fittings which have integral emergency back-up (fittings 4,6,7 and 8) or some installs may need both types to achieve the right emergency lighting levels.

FREE LIGHTING DESIGN SERVICE

Eterna Lighting can provide a free lighting design to help with planning lighting layouts to achieve the correct light levels, but should always be approved by a competent person. Scan the QR code below to find out more!

Eterna have a battery replacement service to help keep your emergency lighting products performing longer!
