## 7.2 Inserting the Optional Wi-Fi card

① Remove the dummy cover

② Plug in the WiFi adapter

Power off the receiver and insert the Wi-Fi card. To do this simply remove the dummy cover on the front of the receiver and plug in the Wi-Fi card. Switch the reciever on and wait for the lights to appear

Now open the mobile app and tap the

three-lined menu on the top left. Next, choose **Add new system** and scan the QR code on the front face of the receiver. If you are prompted to retain previous users say NO and continue.

The system will be added and the app will then ask for the Wi-Fi password. Make sure you are connected to the main router and not an access point to complete the process.

To add or change the Wi-Fi password

at any time, tap the settings icon on the top right of the mobile app home screen. Next select Wi-Fi settings.

To confirm Wi-Fi joining has been successful, you can do the following:

1. Switch the Bluetooth off in your mobile phone Settings

2. Next on the app home screen, try adjusting the temperature.

You will now be the owner of the system and can use the **Manage Users** option in the app to invite more people to join your system.

Even if you were using the app before you inserted to WIFI card, you still need to Add the system again from the app.
